

## **Module 9: Case Study - 1**

## Problem Statement:

You work for XYZ organization. Your organization uses AWS cloud to host their web applications.

## Tasks To Be Performed:

1. Create a Beanstalk environment to host a Custom PHP application to host our application on it.
2. Upload a new PHP file which reads "Updated Hello World" to the Beanstalk environment.
3. Create a Lambda function which uses S3 bucket object creation as a trigger.
4. Launch an OpsWorks stack and host a Hello World html page in the instance of that stack.
